## CURRENTLY BUILDING

<b>Vaelis Group</b>	Applied AI research and product lab — building the cognitive infrastructure layer for Web2 and Web3 digital execution. Dual-vertical: DeFi automation and consumer SaaS, unified under a single AI reasoning core.
<b>Maren</b>	Flagship product. Non-custodial AI co-pilot that translates natural language into deterministic onchain actions — intent parsing, route optimisation, account abstraction, and cryptographic execution. Built for the next generation of DeFi users.

---

## ABOUT

Founder and senior engineer with nearly a decade of experience building production-grade systems across AI infrastructure, blockchain execution, and consumer SaaS. I operate at the intersection of product thinking and deep engineering — making architectural decisions from first principles, leading technical teams, and shipping end-to-end. Most comfortable in early-stage and high-ambiguity environments where ownership and velocity matter most.

---

## EXPERIENCE

### Founder & Senior Software Engineer

Vaelis Group

2025 – Present

*Sole founder · Full-stack, blockchain, AI · Remote*

Founded Vaelis Group and own the full engineering stack — architecture, AI systems, smart contract design, and product delivery across the Web2 and Web3 verticals.

Designed and built Maren: intent-driven AI execution engine with non-custodial architecture, autonomous session keys, and account abstraction — translating plain language into deterministic DeFi actions.

Established the dual-vertical platform thesis: a single AI reasoning core serving both onchain automation and consumer SaaS, with shared cognitive infrastructure across products.

Sole decision-maker on all technical choices: model routing, execution security, infrastructure, and developer tooling.

### Chief Technical Officer

Purple Life Technologies

2021 – Present

*Engineering lead · 2-person founding team · Consumer SaaS*

Lead all technical strategy, architecture decisions, and platform delivery for Purple Life's product portfolio.

Sole architect and engineer of MyStudentKit (mystudentkit.com) — an AI-powered edtech platform scaled independently from zero to 15,000+ active users since 2021.

Built and maintain the full platform: CBT engine with 15,000+ randomised exam questions, instant scoring, AI-assisted learning, and digital skills acquisition — optimised for low-bandwidth and low-end devices across African markets.

Responsible for all infrastructure, performance engineering, and long-term technical roadmap.

## Freelance Senior Frontend Developer

Independent — Upwork

2020 – 2021

*Contract · Remote · React-focused delivery*

Delivered production-ready React frontends for global clients; performance tuning, component architecture, and responsive UI systems.

## Freelance Developer

Independent

2017 – 2020

*Early career · Web development · SME clients*

Built and customised web platforms for SME clients; developed strong foundations in frontend architecture, client delivery, and independent problem-solving.

### TECHNICAL SKILLS

---

<b>Languages</b>	TypeScript, JavaScript, Rust, Python, PHP, Solidity
<b>Frontend</b>	Next.js, React.js, Tailwind CSS, Framer Motion
<b>Backend</b>	Node.js, Express.js, Laravel, FastAPI
<b>Databases</b>	PostgreSQL, MongoDB, MySQL, Redis
<b>Blockchain</b>	Smart Contracts, Account Abstraction, EIP-5792, Coinbase Paymasters, Session Keys, Multi-chain Execution
<b>Infrastructure</b>	Docker, Git, API Design, Performance Optimisation, Zustand, Zod

### SELECTED WORK

---

#### Maren — AI Onchain Co-pilot

*Vaelis Group · In Development*

Non-custodial AI execution layer translating natural language into deterministic DeFi actions. Covers intent parsing, route optimisation, account abstraction, and execution verification across decentralised networks.

#### Base Mini App — Gasless Minting Protocol

*base-poa.vercel.app · 2025*

Demonstration of next-generation onchain UX. EIP-5792 smart intent bundling collapses multi-step approvals into a single user action. Coinbase Paymaster sponsors gas entirely. Passkey-based Smart Wallet onboarding removes seed phrases. Stack: Solidity, Next.js, Tailwind CSS, Framer Motion.

#### MyStudentKit — EdTech Platform

*mystudentkit.com · 2021 – Present · 15,000+ users*

AI-powered educational platform built and scaled independently. CBT engine with 15,000+ randomised exam questions, instant scoring, and AI-assisted learning — designed for performance on low-bandwidth mobile networks.

### EDUCATION

---

<b>B.Sc. Computer Science</b>	University of Essex (Online) · 2023
<b>B.Sc. Hydrology</b>	Federal University of Agriculture, Abeokuta · 2025
